

ZHANG JIE

dodobook1993@gmail.com • +65 9439 7514 • [linkedin.com/in/zhangjie](https://www.linkedin.com/in/zhangjie)

Data Scientist with 5+ years of experience in banking and fintech, specializing in fraud analytics, credit risk, financial crime detection, and machine learning solutions. Experienced in building risk models, transaction monitoring frameworks, and data-driven decisioning systems across banking and BNPL environments. Skilled in Python, SQL, Tableau, and cross-functional stakeholder collaboration to deliver scalable risk and operational solutions.

EDUCATION

SINGAPORE MANAGEMENT UNIVERSITY

Aug 2020 – May 2022

Master of IT in Business - **Artificial Intelligence Track** (GPA 3.5/4.0)

NATIONAL UNIVERSITY OF SINGAPORE

Aug 2012 - Jul 2016

Bachelor of Engineering in Chemical Engineering

PROFESSIONAL EXPERIENCE

FLUID FINANCIAL PTE.LTD. - Singapore

Aug 2025 - Present

Fluid is a B2B Buy Now Pay Later (BNPL) fintech company, providing working capital solutions to SMEs

Senior Data Scientist

Key Responsibilities and Achievements:

- Lead the development and optimization of SME credit risk strategies to support underwriting, limit assignment, and portfolio risk management decisions
- Design and implement risk tiering frameworks to dynamically segment merchants based on transaction behavior, repayment patterns, and financial risk indicators
- Develop portfolio monitoring and early warning systems to identify delinquency trends, abnormal transaction activity, and emerging credit risks
- Contribute to the development of AI-driven reconciliation workflows and intelligent matching systems to automate payment-to-invoice mapping, while exploring LLM and AI-agent based approaches to improve operational efficiency and workflow automation
- Partner closely with product, operations, and decision engine teams to refine automated risk controls and improve real-time credit decisioning workflows
- Build Tableau dashboards and automated reporting pipelines to provide management with visibility into portfolio performance, approval quality, default trends, and operational KPIs
- Conduct deep-dive analysis on customer and transaction-level risk behavior to support risk policy adjustments and business growth initiatives
- Collaborate with cross-functional stakeholders to balance growth objectives, customer experience, and portfolio risk exposure
- Support the enhancement of internal risk infrastructure and analytics capabilities for scalable risk operations

MAYBANK SINGAPORE LIMITED - Singapore

Oct 2022 - Aug2025

Maybank is Malaysia's largest bank and the fourth top brand in amongst the Asean countries

Data Scientist

Key Responsibilities:

- Lead end-to-end data science initiatives to enhance customer acquisition, engagement, and retention strategies
- Design and deploy machine learning and AI solutions for real-world banking applications
- Partner with stakeholders across business, compliance, product, and engineering teams to translate complex problems into data-driven use cases
- Communicate insights effectively to both technical and business audiences
- Ensure all models are interpretable, scalable, and aligned with regulatory compliance

Focus Areas and Achievements:

- **Revenue Uplift via Personalization & Cross-Sell**
 - Developed hyper-personalized product recommendation models using clustering, behavioral segmentation, and purchase patterns, leading to a 9% uplift in product conversion rate

- Built user personas by analyzing 600,000+ customer profiles to drive targeted marketing campaigns and improve engagement
- Implemented ML-driven cross-sell framework that identified high-propensity product pairs, achieving a 15% increase in average product holding per customer for Private & Premier segment
- Automated customer profiling pipeline to support real-time personalization, reducing manual efforts by 80%
- **Fraud Risk & Financial Crime Analytics**
 - Developed transaction monitoring and money mule detection models using network analytics and behavioral risk indicators, enabling proactive identification of suspicious accounts
 - Built anomaly detection frameworks to identify potential shell companies and support compliance investigation workflows
 - Developed hybrid rule-based and machine learning AML detection solutions across large-scale transaction datasets, improving alert prioritization and investigation efficiency
- **Generative AI (Operational Efficiency & Customer Support)**
 - Developed a GenAI-powered chatbot for branch operations, helping frontline staff answer product and process queries instantly—reduced handling time by 50%
 - Co-created a customer service chatbot for the contact center, automating over 40% of Tier 1 queries, freeing up agents for complex issues
 - Designed a text summarization tool to auto-generate briefs from lengthy Corporate Sustainability documents, saving business users ~10 hours/week per person

UNITED OVERSEAS BANK LIMITED – Singapore

Aug 2021 - Jan 2022

UOB is the third largest multinational banking organization headquartered in Singapore

STA / Machine Learning Intern

- Supported the development of machine learning solutions for fraud detection, anomaly detection, and test automation using Python
- Worked with business analysts, architects, and developers to integrate ML solutions into operational workflows

ACADEMIC PROJECTS

Purchase & Redemption Prediction – Alibaba Tianchi Competition

- Built machine learning forecasting models including Random Forest, LSTM, and RNN to predict cash flows for large-scale financial datasets
- Ranked Top 3% (223/7574 teams) in Alibaba Tianchi competition

Machine Reading Comprehension – NLP Project

- Developed an NLP web application using BERT, DistilBERT, and RoBERTa models for question answering and reading comprehension tasks

OTHER EXPERIENCE

YONYOU SG PTE. LTD. – Singapore

Dec 2018 - Apr 2020

Yonyou is the largest enterprise software service company in China, with its Southeast Asian headquarter in Singapore

Project Manager (Jul2019 – Apr2020)

- Led enterprise software implementation projects for banking and corporate clients across Southeast Asia
- Oversaw end-to-end project execution, client engagement, and cross-functional coordination to ensure timely and high-quality delivery

Software Consultant (Dec 2018 – Jul 2019)

- Provided technical consultation and localization support for enterprise software solutions in the Southeast Asian market
- Collaborated with development teams to optimize product performance and implemented features tailored to local requirements, including CPF and IRAS integration

ADDITIONAL

- **Technical Skills** – Python, SQL, Tableau, Machine Learning, Risk Analytics, GenAI Tools, Prompt Engineering, MLOps, Data Visualization
- **Language fluency:** English (Professional) | Mandarin (Native) | Japanese (Basic)
- **Hobbies:** Long-distance running (completed multiple half-marathons) | Nature hiking | PC games
- **Work Authorization:** Singapore (Singapore Citizen)
